AirPlay to HDTV

iPad

Apple TV
2nd or 3rd
Generation

HDTV

No cables needed!

Settings

Configure external video

External Video

Use OnSong with projectors and stage panels

Use HD Mirroring

Newer devices such as the iPad 2 support screen mirroring. This places what you see on your iPad screen onto the external video device. By default, OnSong will override screen mirroring and take over the external screen.

You must restart OnSong for this to take effect.

Close OnSong from the multitasking bar and restart.

External Video

Use OnSong with projectors and stage panels

Screen Orientation

The screen orientation setting is used when viewing chord charts on an external monitor. The default setting is "Same" which keeps the screen in the same orientation as the device. You can also set this to a specific orientation. This is useful if you have a monitor on stage in the vertical or portrait position and want to maintain that while being free to adjust the orientation of the device.

Same, 0°, 90°, 180° or 270°

External Video

Use OnSong with projectors and stage panels

Screen Resolution

OnSong attempts to discover the highest resolution available on the connect device. In the event that you want to set another resolution, choose it here from a list of common resolutions.

Highest Available, 640x480, 800x600,
1024x768, 1280x720 or 1920x1080
