Takes you to the iTunes store to rate us

Editors

Tablature editor and song reporting

Song Reporting

Keeping track of the music you play

Song Reporting

- OnSong can keep track of the songs you play
- Turn on Song Reporting
Utilities Menu › Editors › Song Reporting
- When viewing a song, OnSong waits until it's recorded
- View the Song Reporting screen to get reports
- Emailing, exporting and printing coming soon

Add-Ons

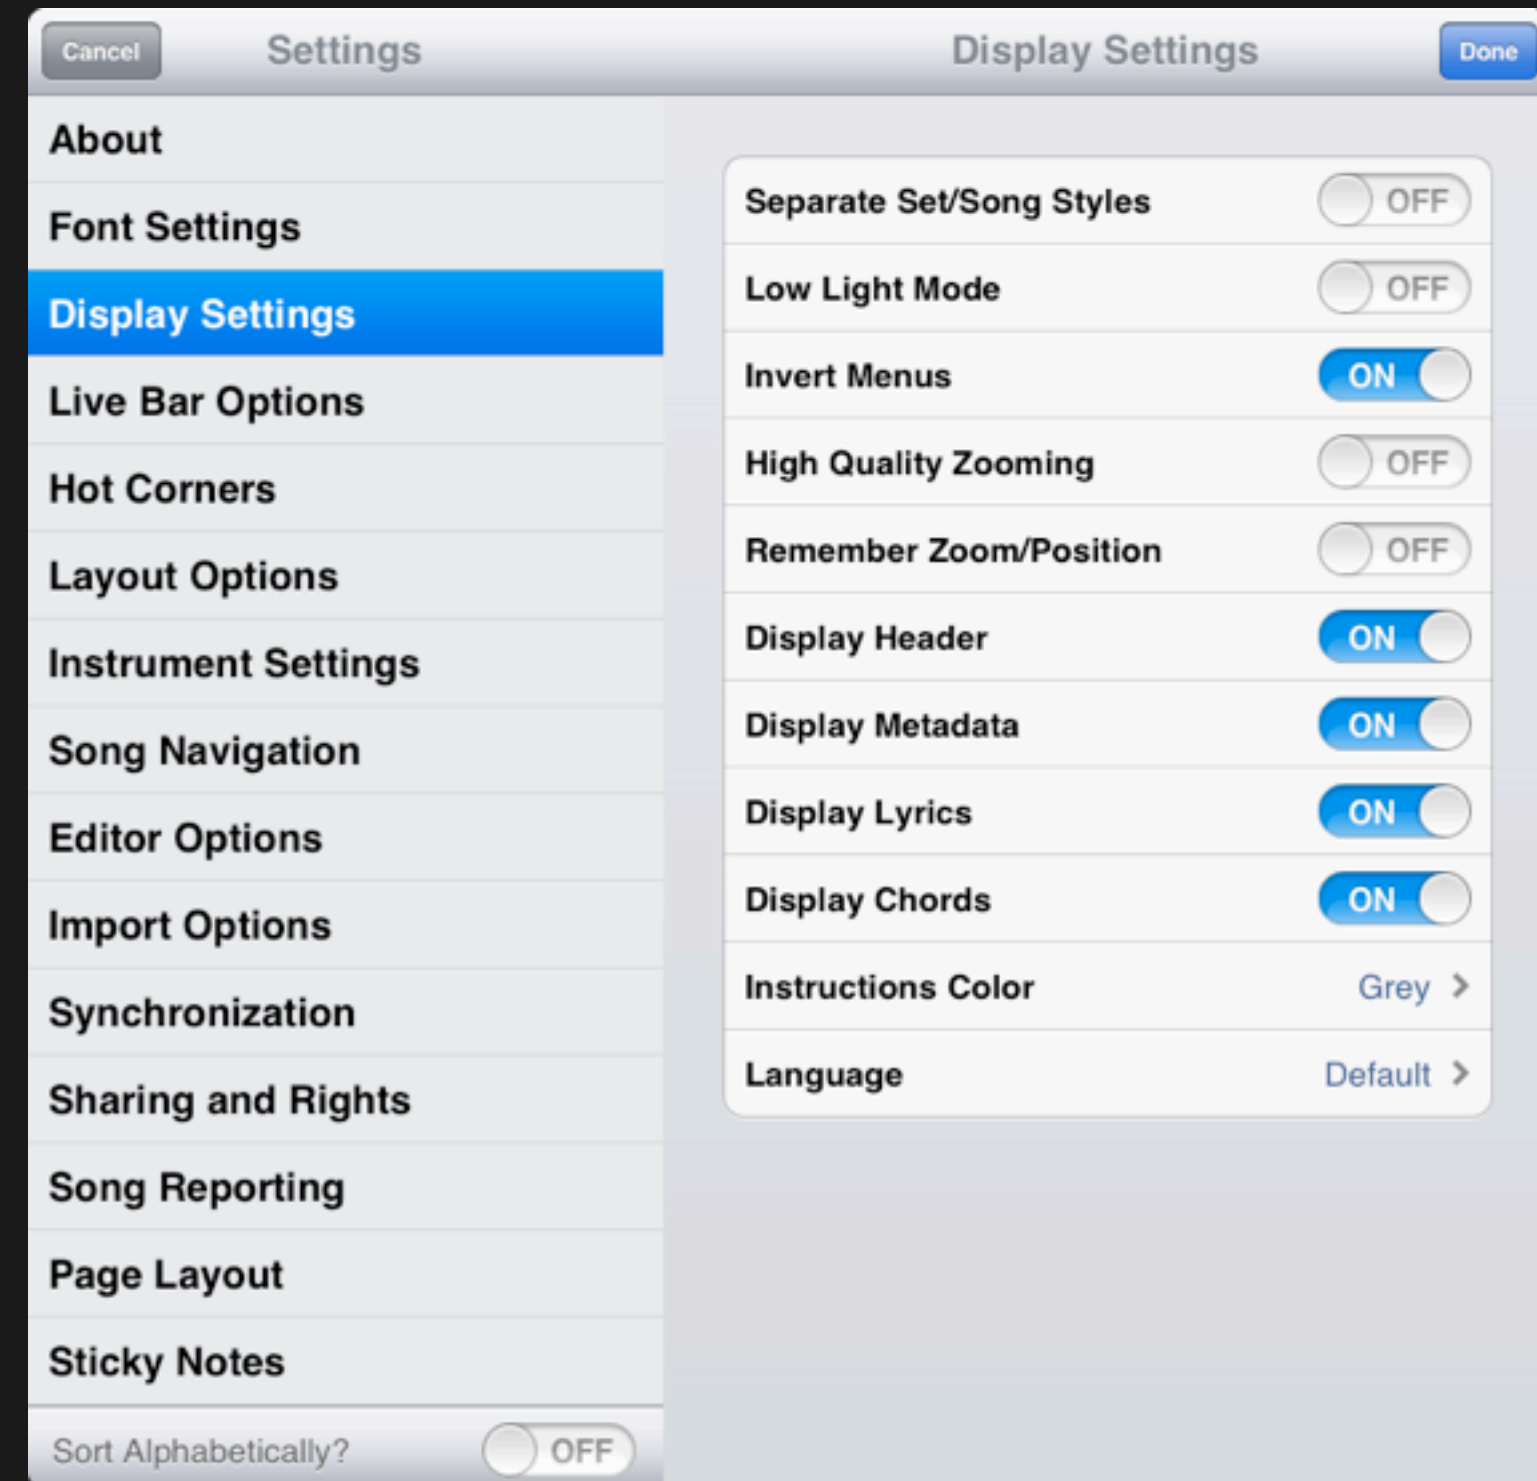

Extend OnSong's functionality

Settings

Customize and personalize OnSong

Settings Screen

- Provides quick, in-app access to all settings
- Displays all settings in a categorized manner
- Accessible without running OnSong in the Settings app
- Discussed in detail in the Settings presentation

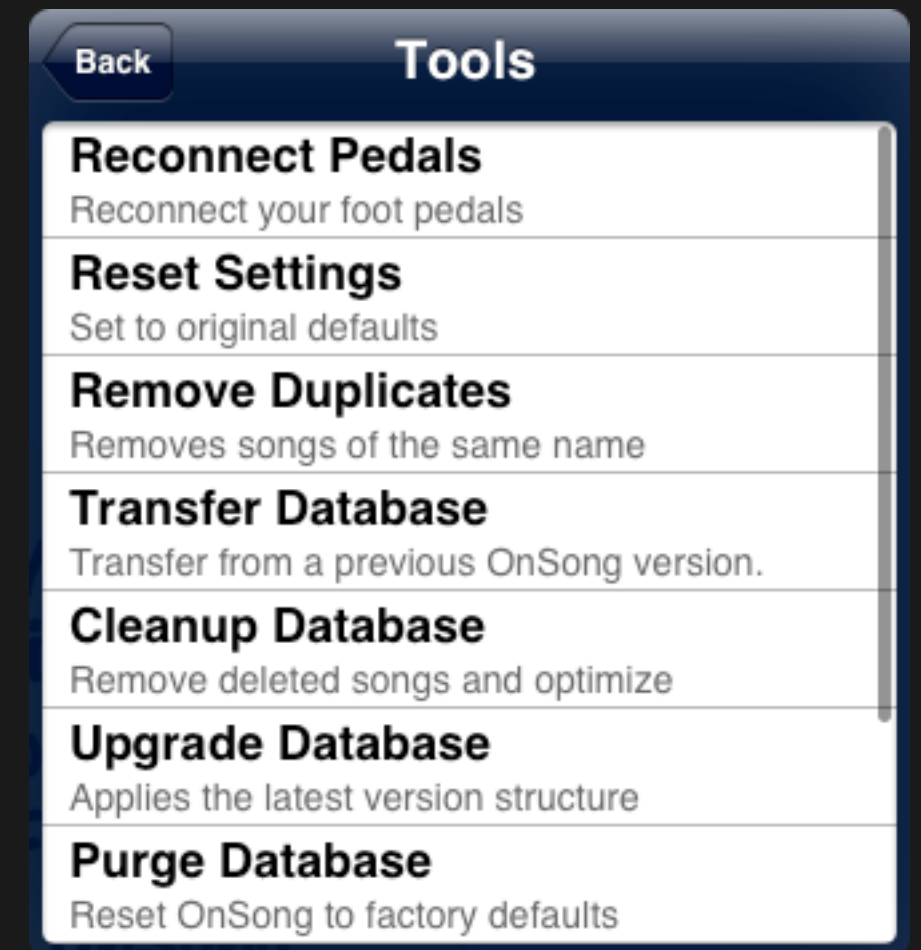

Tools

Additional tools for maintenance

Tools Menu

- **Reconnect Pedals**
Reconnect your foot pedals if they become disconnected
- **Reset Settings**
Clears your settings to the default values.
- **Remove Duplicates**
Reviews the songs in your database and remove songs that have the same name. OnSong will keep the song that was modified last, deleting older versions.

Tools Menu

- **Transfer Database**
Initiates a database transfer from an old version of OnSong
 - Not supported on all versions of OnSong
 - May crash on larger libraries. Transfer manually in that case.
- **Cleanup Database**
Removes unused external files, purges deleted songs, “vacuums” the database to improve performance and fixes indexing issues.

Tools Menu

- **Upgrade Database**

Upgrades are automatically applied when OnSong detects an older version of the database. As OnSong adds more features, the database structure must be modified. If you have problems after upgrading OnSong, try this menu option.

- **Purge Database**

Permanently deletes your current database and reset it as a new installation of OnSong.

Stores a backup first to iTunes file sharing
